

**THE RADIO VISION ELECTRONIC NETWORK / ANALOG OUTPUT/ VIEWING
SYSTEM**

THE RAVEN / RVS

THREE CLAIMS ONLY

1. To be able to enjoy AM or FM Stereo and Still Life Pictures (A New picture every minute) using ordinary AM/FM receiving equipment (KENWOOD VC – H1 Slow Scan Converter can produce AM OR FM picture.) with any AM/FM receiver.
4. Music Radio Stations will be able to run full motion music DVD'S instead of just CD'S. The slow Scan Converter will convert the video to a 3khz Audio Tone for Broadcast over the commercial AM or FM Band. (Robot 36 for AM Picture or fast FM for FM Pictures.) The AM Video is 8khz down from the main Radio Carrier. The FM Video can be 57khz (RDS) or 67khz (SCA) above the main FM Carrier.
6. Satellite Radio XM and SIRIUS News Stations such as CNN and FOX News Channel are really Audio Feeds from the Cable TV Stations to the Radio Satellite Stations, which makes for awkward listening such as being told, to look at the Weather Map or told to notice the suspect standing by the car.

Instead, Commercial and Cable Television Stations can run SSTV over their SAP for rebroadcast over AM/FM or Satellite Radio Station to Receivers using SSTV Conversions.
